Great Wildebeest Migration

1 ONE OF THE 7 NATURAL WONDERS OF THE WORLD

Considered the most thrilling spectacle in the animal kingdom, this epic journey migrates from Tanzania's Serengeti to Kenya's Masai Mara.

2 THE WORLD'S LARGEST OVERLAND MAMMAL MIGRATION

The annual movement of wildebeest and other herbivores across the Serengeti-Mara ecosystem consists of more than 1.5 million wildebeest, 500 000 zebra, 200 000 Thompson's gazelle and 18 000 eland.

3 THE ANIMALS MIGRATE OVER 800KM (500MI.)

Due to the sheer size of the herd, the animals have to move to be able to survive. The herds generally follow the rain, as where there is rain, there is fresh grass. Once grass is depleted in one area, they will move on to a grassy area.

It's estimated 500 000 wildebeest calves are born annually.))

The annual movement of wildebeest and other herbivores across the Serengeti-Mara ecosystem is rarely the same in terms of precise timing and direction.

The herds are usually calving on the short grassy plains in the southern Serengeti. This area is made up of nutrient rich soil important for the wildebeest and their calves. A diverse eco-system – forested areas, marshes, soda lakes and big open plains.

The herds are moving, in splinter herds, up through central Serengeti to the Western corridor. A great time for days out with a picnic lunch to find the herds and see them moving in long lines. Excellent leopard sightings in Central and lion and elephant in Grumeti.

JUNE – JULY

Splinter herds usually congregate in the western corridor and start moving north. The herds move northwest, towards &Beyond Grumeti Serengeti Tented Camp, where dependent on the rain. The animals can be seen crossing the Grumeti River towards the Northern Serengeti.

JULY – OCTOBER

The big herds congregate in Northern Serengeti and the Masai Mara. Following the rain, the herds cross over to the Masai Mara and then often return to the Serengeti. This continues for a number of months. There are over 10 common river crossing points.

NOVEMBER – DECEMBER

The migration herds are on the move again, down past Grumeti or straight down to the Central Serengeti. Often breaking away they move south via the eastern, western and central Serengeti. The herds move at a different pace with many going through the Lobo area towards the southern plains.
